Slips, trips and falls

#	Date	Completed by	Impact	Record
292	03/01/2018 13:00	An Other	1	A member of the public fell about 10yards past the site office having walked past the barriers and 2 signs. (photo of signs we use attached - one is on the entrance gate and the other immediately outside the site office) It was a minor trip and no injury sustained. JB saw it happen and reported it to me. It was a Mr S who was wanting to know when the properties were going to be released for sale. He was asked by JB why he'd ignored the signs. He accepted that he'd seen the signs but had no explanation for ignoring the instructions. He accepted it was his fault and apologised. - Impact 1

Electricity

--	--	--

#	Date	Completed by	Impact	Record
293	07/01/2018 08:30	An Other	2	Received a call from a resident living adjacent to the northern boundary of our site. A man walking his dog had reported to him that the electricity cable to their property which goes over the communal public space of our site had been flown into by a swan. The live cable was on the ground and exposed. There were several people and dogs on the space and he was telling them to keep away. Their electricity supply was off. They will ring SSE to report the problem. We had a two member of the security team on the public space within 5 minutes clearing the area, isolating the part where the cable was on the ground and waiting till the electricity company was on site. - Impact 2

Working at height

#	Date	Completed by	Impact	Record
294	08/01/2018 10:30	An Other	3	One of our contractors YZ Ltd sent a member of staff to erect some signage. He wasn't the usual man who turns up and was clearly not trained. He had to be stopped and sent away. He said he shouldn't have been sent to the job and hadn't had any induction to the work. Afterwards we rang YZ to complain and say it was dangerous. He was balancing on a strut on the side of the cage leaning over to a post. He was wobbling around and had no safety kit on. Later the site manager sent a photo he'd taken at the time (attached) - Impact 3

Moving objects

#	Date	Completed by	Impact	Record
295	13/01/2018 02:00	An Other	2	A dumper truck driven by one of our very experienced men was hit by a supply vehicle arriving to make a delivery. It was the first time the supply vehicle driver had been on site. He'd got lost, "didn't see the signs" and got into a prohibited area. Neither drivers were injured but the supply vehicle was seriously damaged. - Impact 2

Protective clothing

#	Date	Completed by	Impact	Record
296	16/01/2018 13:15	An Other	1	WB a bricklayer was working on plot 66 today but not wearing a hard hat. He is an apprentice and has only been on the site for 2 days. He was given a warning by the site manager. WB said he'd gone to his car to get his lunch and forgotten to put the hat on when he walked back into the site. - Impact 1

Material and manual handling

#	Date	Completed by	Impact	Record
---	------	--------------	--------	--------

#	Date	Completed by	Impact	Record
297	18/01/2018 11:30	An Other	1	TB came to the site office saying he'd hurt his back after manual handling some pallets of bricks. He said he couldn't work anymore today and needed to go to the drs for some painkillers. He'd done some more of the same lifting yesterday and his back had started to ache then. He said he hadn't been properly trained and was talking about trying to get some compensation. TB's record of training shows he was inducted fully last October and this included manual and lifting equipment training. He'd passed the test on H&S before starting work. - Impact 1

■ Collapse

#	Date	Completed by	Impact	Record
298	19/01/2018 14:00	An Other	3	The scaffolding on plot 36 collapsed on one side after overhead lifting equipment knocked the side of the structure. One bricklayer (GT) was on the scaffolding but he saw the equipment getting too close and jumped off. He landed badly and he had to go to hospital. He's injured his leg. The overhead lifting equipment is owned by AB Ltd and was being operated by a member of their staff. There's no clue yet about why he get so close to the scaffolding. There's an ongoing investigation about this. - Impact 3
